Company details

Fill in the shaded fields, then complete the declaration and signature on page 3. Save the completed PDF before uploading it to your verified Yesoma request.

Company legal name

Yesoma workspace name

Request reference (if available)

Company website

Headquarters country, city and region

Representative's full legal name

Representative's company role

Business email and verification contact

Internet or network provider

Static office network or private corporate VPN

Requested period (up to 90 days; trial up to 30)

Business purpose for this network access

Assignment and company-control evidence references

List the requested public addresses on page 2. Include IPv6 where used. Do not provide passwords, secret keys or private home addresses.

Public network addresses

List each static, public internet-facing address or the smallest necessary address range. An address range may be written as a CIDR block. Include IPv6 when used.

	Address or CIDR range	Office / VPN purpose	Assignment/control evidence

Use one address or range per row. Give a short purpose and evidence reference for each network. Put longer explanations and evidence references on page 1.

Representative declaration

Statement by the company representative

I, Full legal name _____, acting as Company role _____

for Company legal name _____,

confirm that I am authorised to submit this request on the company's behalf.

The public IP addresses and address ranges listed above are statically assigned to and controlled by our company for its office network or private corporate VPN. Where the addresses are supplied by an internet or hosting provider, we have provided evidence of assignment and company control.

These addresses are not shared public VPN exits, residential connections or dynamically assigned connections. We have described their business purpose and supplied the requested evidence.

Our company will manage access through these networks in accordance with Yesoma's terms and the conditions of any approved exception. We will promptly notify Yesoma Support of changes to their assignment, control, use or security.

We understand that approval applies only to the specified workspace, addresses, purpose and period. Approval may expire or be revoked. Normal authentication, two-factor authentication, workspace permissions and other security requirements remain applicable. A technical network exception does not establish legal eligibility for access.

The information provided is accurate and complete to the best of my knowledge.

Business email

Signature date

Representative's signature (type your name or sign in your PDF app)

An authorised CISO, IT/security lead, company director or business owner may sign. Yesoma verifies the representative's authority before approval.

Yesoma approval record

Staff complete this section after review. A signature or approval decision alone does not show that implementation and verification have finished.

Yesoma completes and signs a separate review record during Security review. The customer's original signed statement is retained unchanged.

Renewal/revocation history

Normal exceptions have a maximum 90-day period. Trial/proof-of-concept exceptions have a maximum 30-day period. Renewal requires fresh review. Replacement addresses require a new linked request. Restrict the signed document and review evidence to authorised participants under the applicable retention policy.
